EdwardsNick commented 21 days ago   +😊 ✏

Closes #242
Closes #241
Closes #207
Closes #50

Edit: Now allows filtering by multiple values on one column, see below

Needed this for a project, so I implemented it.

To search by columns you use the following functions:

addParams(string, int) //add a searchPhrase to a particular column index

removeParams (string, int) //Remove the search parameter at the column index
Note: Leaving the string parameter as null removes all parameters from a column

clearParams () //remove all parameters from all columns

Searching by hidden columns doesn't work currently, but if someone really needs that, I could implement that reasonably quickly.

Also, Searching via the default search bar still works after filtering. The search is simply applied to the results of the filters.

For example:

var grid = $("#basic-grid").bootgrid();

grid.bootgrid("clearParams"); //Clear the parameters
grid.bootgrid("addParams", "searchParam", 1); //add a search parameter to column 1
grid.bootgrid("addParams", "searchParam", 2); //add a search parameter to column 2
grid.bootgrid("addParams", "otherParam", 2); //add another search parameter to column 2
grid.bootgrid("removeParams", 2); //remove all search parameters from column 2

Search by column #242   ⓘ Open

Question: How do you filter by columns? #241   ⓘ Open

search by column #207   ⓘ Open

is it possible to add filter field behind the search field? #50   ⓘ Open

neo22s commented 21 days ago   +☺

This looks really cool!

Implement filtering by multiple values   ✔ 62d7ac4

renerlemes commented 21 days ago   +☺

@EdwardsNick

I am instantiating the bootgrid as follows:

$("[data-toggle=bootgrid]").bootgrid({.....

How to use your implementation?

EdwardsNick commented 21 days ago   +☺ ✏ ✕

@renerlemes
AFAIK, (and I'm no expert, that's rstaib who has disappeared) you should be initializing your bootgrid like
so:

var grid = $("#idOfHtmlTable").bootgrid({maybe some stuff here});

You only use "data-toggle=bootgrid" if you wanted to initialize a basic bootgrid on a html table without
calling any Javascript

See the examples here:
http://www.jquery-bootgrid.com/Examples

As for my own work, once the table is initialized properly, you should only have to call the functions like I
showed in my pull request. If anyone finds any bugs/issues, let me know.

renerlemes commented 20 days ago   +☺

@EdwardsNick

I was able to use its implementation.
One suggestion would be to use HTML attributes, for example: data-bootgrid-search = "1", where 1
would be the column to be searched.

So could implement in an HTML page without using JavaScript

Add more commits by pushing to the `master` branch on **EdwardsNick/jquery-bootgrid**.
